RE: Tree Removal at Weld Residence

60 Washington Ave. Dobbs Ferry NY 10522

To whom it may concern,

Tigre Tree Care has been contracted by the Welds' to remove 12 dead or endangering trees in their landscape.

Below is the arborist evaluation of each of the trees applied for documented as valid reasons for removal of the trees in the landscape. Ultimately the trees should be removed because of the intolerable risk they present to the client's and neighbor's life and property. The trees are listed in order of coming up the driveway from the entrance on Washington Avenue.

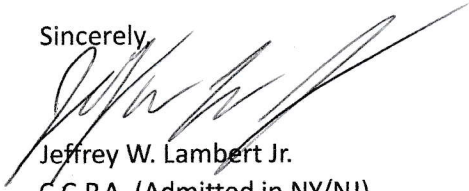

1. Norway Maple-40" DBH-This species is considered invasive by NYSDEC. This tree is located along the edge of the driveway with limited root space on the driveway side. The tree has extensive decay at the base and is in poor health and structure. The tree poses a risk to cars, structures and people, with the potential to create unsafe inaccessibility conditions.
2. Black Locust-20" DBH-This tree has very large columns of decay, has sapwood rot and is located precariously over the driveway. The tree poses risk to cars, structures and people, with potential to create unsafe inaccessibility conditions.
3. Norway Maple-20" DBH-This species is considered invasive by NYSDEC. This tree has codominant stems and is in poor health and structure. This tree has limited root space on the driveway side. Poses risk to cars, structures and people, with potential to create unsafe inaccessibility conditions.
4. Norway Maple-40" DBH-This species is considered invasive by NYSDEC. This tree is located along the edge of the driveway with limited root space on the driveway side. This tree has extensive decay at the base and is in poor health and structure with codominant stems. Poses risk to cars, structures and people, with potential to create unsafe inaccessibility conditions.
5. Black Cherry-18" DBH-Tree is located along the driveway with limited root space along the driveway side. The driveway side of the tree has died back extensively and the tree would not survive pruning. Poses risk to cars and people with the potential to create unsafe inaccessibility conditions.
6. Sassafras-20" DBH-3 trees that are dead and in poor structural condition, located to the left of the neighbor's fence. Posing risk to people and property.
7. Norway Maple-24" DBH-This species is considered invasive by the NYSDEC. The tree is located along the driveway with limited root space on the driveway side. The tree has a large area of decay at the base of the tree. The tree poses a risk to cars, people and surrounding neighbor's property, with the potential to create unsafe inaccessibility conditions.
8. Norway Maples-14", 14", & 16" DBH-This species is considered invasive by the NYSDEC. These trees are located along the driveway with limited root space on the driveway side. These trees are located within striking distance of the house and pose risk of failure to people, cars and the structure.

The removal of the trees will not adversely affect the landscape. There are many trees in this landscape and they will respond well to the newly available sunlight and water. The homeowner's will be replacing the trees on a 1:1 basis and the stumps will remain for slope stabilization.

All work will be performed to ANSI A300 and Z1331.1 standards and local laws & regulations.

I am a certified arborist. MY certification # is NY-6334A. Nothing in this document is to be construed as a tree risk assessment.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeffrey W. Lambert Jr.', written over a horizontal line.

Please note application for (at2021-0174)

60 Washington Ave weld residents.

Arborist also recommended more additional trees to come down as they are also in poor and dangerous conditions.

-3 sassafras trees that are all "20 caliber inch trees that are completely dead

And

3 maple trees 14" -14" -16" DBH that Pose risk of failure to the home and also to people / property.
