**To:** Liz Dreaper; Margaret Parr  
**Subject:** Workshop Item  
**Attachments:** Rec March 6th 2023.ppt

The DF Football Organizations are looking to install three light assemblies at Gould Park. These lights would be purchased by the organizations and installed by a licensed electrician that we have engaged.

We are requesting that we allowed to install them on the three existing telephone poles at the park. These lights use standard 110 electricity and would not require any Park electricity. The units would be configured for event based activations only. Small generators would be used for any night games and de-activated at the events' conclusion.

These lights would replace most of the requirement to rent ten large diesel generators. While saving a significant amount of expense for these organizations, there are additional advantages with these lights:

- Reduced noise for their use at each event
- Reduced gas emissions for their use at each event
- Targeted LED lights that would reduce ancillary disruption to the residential neighbors
- Fewer lights required to light the field
- Shared Resource – other clubs and events could make use of the lights

Traditionally, the combined Varsity and Youth organizations host three nighttime events each season at Gould. Two Friday night games for the Varsity, and one Saturday game for the Youth teams. We would hope to keep the same cadence going forward.
